DAVID DONIKA PANJAITAN

Full-Stack Developer (Java / Spring, Node.js, React)

South Jakarta, Indonesia
Email: daviddonikapanjaitan@gmail.com
Languages: Indonesian, English

SUMMARY

Full-Stack Developer with experience as a Java Developer using the Spring Framework, as a Node.js Developer using the Express.js Framework, and as a Front-End Developer working with Progressive Web App and Responsive Web Design concepts.

SKILLS

- Java web development using the Spring Framework, including Spring Data JPA as ORM (Object-Relational Mapping), Spring Boot, Spring Web, and Spring MVC.
- Java middleware programming using RestTemplate in the Spring Framework or the Apache HTTP library with HttpGet, HttpPost, and HttpPut.
- Full-stack development using Java Spring with the Thymeleaf template engine.
- Node.js development using the Express.js Framework for full-stack development with the Mustache template engine.
- Front-end JavaScript library React, using the Hook API.
- Progressive Web App and Responsive Web Design concepts such as CSS Grid System, CSS media queries, and push notifications using web sockets on the front end.
- Message brokers and event-driven architecture concepts, such as using Redis Pub/Sub (publisher-subscriber) to exchange data between services.
- Microservices concepts such as RESTful APIs, API gateway using Zuul, message brokers such as Kafka and RabbitMQ with Spring Cloud Stream, centralized logging with the ELK stack, monitoring with the Eureka Netflix discovery client and Spring Boot Admin dashboard, Hystrix for circuit breaking with fallback methods, and Ribbon and Feign client for load balancing.
- Relational databases (RDBMS) such as MySQL, Microsoft SQL Server, and PostgreSQL.
- NoSQL databases such as MongoDB, Elasticsearch, and Redis.
- AWS, Linux, Portainer, MinIO, and RustFS.

AI SKILLS

- Agentic AI coding tools such as Claude Code, OpenCode, and Hermes Agent.
- Spring AI framework for integrating large language models (LLMs) into Spring Boot applications.
- Agentic AI design patterns for LLM inference, such as tool calling, ReAct, planning, reflection, and multi-agent workflows.

WORK EXPERIENCE

Senior Backend Developer - PT. Appfuxion Consulting Indonesia

March 2024 - Present

- AGIS Test Suite: built a platform that automatically generates test suites from a source document; the document is uploaded and digested as context, allowing users to chat with it and generate test cases from its contents. Technology used: Spring Boot, Java, Redis, and Kafka, among others. Client: CIMB Malaysia.

- AGIS Claims: built a claims adjudication system that derives decisions from receipt and insurance documents, producing approve or decline outcomes to support adjudication decision-making. Technology used: Spring Boot, Java, Redis, and Kafka, among others. Clients: Allianz Malaysia and Tokio Marine Insurance Malaysia.

Java Engineer - PT. Nusa Satu Inti Artha (DOKU)
March 2022 - March 2024

- Placed on the Remittance team to build middleware for SNAP API standardization using the Java Spring Boot framework with middleware libraries such as RestTemplate; later reassigned to help build service tests using Cucumber.
- Reassigned to the Sales Enablement team to build the Affiliation API, Sales Dashboard, KYB Dashboard, Blast Email, and Promo Engine projects, using Spring Boot with Redis for caching, PostgreSQL as the database, Alibaba Cloud as the cloud platform, and Kafka for message queue integration.

Software Developer - PT. XL Axiata, Tbk. (contracted through PT. XSIS Mitra Utama)
January 2021 - March 2022

- Enhanced the back end of AXIS Web Grosir using Spring Boot with Redis to cache voucher purchases and OTP emails, and Next.js on the front end; used Spring Cloud for microservices (centralized configuration, centralized logging, API gateway), Redis for caching, Oracle as the database, GitLab for source control, and Docker Compose for local testing.
- Enhanced the back end of XL Bizcare using Spring Boot with Angular on the front end; deployed to an on-premise server using Jenkins and a Dockerfile, and also to a Kubernetes environment; used Swagger for API documentation, Plop.js to auto-generate Angular and Spring Boot code, and Kafka for asynchronous system integration.

Software Developer - PT. Bank Mega, Tbk. (contracted through PT. XSIS Mitra Utama)
March 2020 - December 2020

- Built a credit card onboarding application using OCR to scan the E-KTP (Identity Card), liveness detection, and prewash technology for blacklist and government database validation; delivered as a Progressive Web App (PWA) with Responsive Web Design (RWD), camera access, and mobile responsiveness. Technology used: React (front end), Java Spring Boot with Spring Web and Spring JPA (back end), MySQL, Log4j with daily rolling logs, and Material Bootstrap.
- Built a branch delivery system for teller transactions covering cash withdrawal, interbank transfer, and credit card transactions, with user roles, virtual account payment, journal printing, and purchase transactions. Technology used: Node.js with Express.js, a microservices architecture, Redis Pub/Sub as the message broker, jQuery, MongoDB, and Bootstrap; modified a Node.js library to convert between ISO 8583 and JSON using regex and array splitting.
- Built a funding onboarding application covering bank customer registration, current accounts, and deposits, querying core banking via ISO 8583 and adding OCR and selfie detection for ID validation against the government database. Technology used: Node.js with Express.js, jQuery, Material Bootstrap, and a Spring REST API as middleware to the database log; implemented IP request tracking and IMEI detection (Android 9 and earlier).
- Built a content management system in vanilla PHP (no framework) to manage images, promotional information, product lists, and server files, including credit card information and product descriptions for the credit card onboarding application.

Software Developer - PT. XSIS Mitra Utama, Tbk.
October 2019 - March 2020

- Completed a training and internship program; built a Human Resource Management application as an internal project, including login, user roles, employee scheduling, leave scheduling, and employee registration. Technology used: Spring Framework (Spring Web for REST APIs, Spring MVC and Thymeleaf for the template engine, Spring JPA for ORM), PostgreSQL, and jQuery.

EDUCATION

Bina Nusantara University - Information Systems and Management
GPA: 3.25

CERTIFICATIONS

- Java Programming Bootcamp, January 2020
