Summary

Full-Stack Developer with experience as a Java Developer using the Spring Framework, as a Node.js Developer using the Express.js Framework, and as a Front-End Developer working with Progressive Web App and Responsive Web Design concepts.

Skills

- Experience in Java web development using the Spring Framework, including Spring Data JPA as ORM (Object-Relational Mapping), Spring Boot, Spring Web, and Spring MVC.
- Experience in Java middleware programming using RestTemplate in the Spring Framework or the Apache HTTP library with HttpGet, HttpPost, and HttpPut.
- Experience in full-stack development using Java Spring with the Thymeleaf template engine.
- Experience in Node.js development using the Express.js Framework for full-stack development with the Mustache template engine.
- Experience with the front-end JavaScript library React, using the Hook API.
- Experience in Progressive Web App and Responsive Web Design concepts such as CSS Grid System, CSS media queries, and push notifications using web sockets on the front end.
- Familiar with message brokers and event-driven architecture concepts, such as using Redis Pub/Sub (publisher-subscriber) to exchange data between services.
- Familiar with microservices concepts such as RESTful APIs, an API gateway using Zuul, message brokers such as Kafka and RabbitMQ with Spring Cloud Stream, centralized logging with the ELK stack, monitoring with the Eureka Netflix discovery client and Spring Boot Admin dashboard, Hystrix for circuit breaking with fallback methods, and Ribbon and Feign client for load balancing.
- Experience with relational databases (RDBMS) such as MySQL, Microsoft SQL Server, and PostgreSQL.
- Experience with NoSQL databases such as MongoDB, Elasticsearch, and Redis.
- Experience with AWS, Linux, Portainer, MinIO, and RustFS.

AI Skills

- Familiar with agentic AI coding tools such as Claude Code, OpenCode, and Hermes Agent.
- Familiar with the Spring AI framework for integrating large language models (LLMs) into Spring Boot applications.
- Familiar with agentic AI design patterns for LLM inference, such as tool calling, ReAct, planning, reflection, and multi-agent workflows.

Education

Bina Nusantara University, Information Systems and Management, GPA 3.25.

Certifications

Java Programming Bootcamp, January 2020.

Experience

Software Developer - 10/2019 to 03/2020
PT. XSIS Mitra Utama, Tbk.
Training and internship program.

Software Developer - 03/2020 to 12/2020
PT. Bank Mega, Tbk.
Contracted through PT. XSIS Mitra Utama.

Software Developer - 01/2021 to 03/2022
PT. XL Axiata, Tbk.
Contracted through PT. XSIS Mitra Utama.

Java Engineer - 03/2022 to 03/2024
PT. Nusa Satu Inti Artha (DOKU)

Senior Backend Developer - 03/2024 to Present
PT. Appfuxion Consulting Indonesia

Project Experience

XSIS Mitra Utama Project

1. **Project Summary**

   Built a Human Resource Management application as an internal project for use within XSIS Mitra Utama.

   Features

   - Login
   - User Roles
   - Employee scheduling
   - Leave scheduling
   - Employee registration

   Technology used

   Spring Framework including Spring Web for REST APIs, Spring MVC and Thymeleaf for the template engine, and Spring JPA for ORM (Object-Relational Mapping). PostgreSQL as the database and jQuery on the front end.

Project Experience

Mega Bank Project

1. **Project Summary**

   Built an onboarding application for credit card registration, using OCR (Optical Character Recognition) to scan the E-KTP (Identity Card), liveness detection to verify that applicant data is valid, and prewash technology for blacklist validation and validation of ID card data against the government database. Delivered as a PWA (Progressive Web App) with RWD (Responsive Web Design), giving the app camera access and mobile responsiveness.

   Technology used

   React on the front end; Java Spring Boot with Spring Web and Spring JPA on the back end; MySQL as the log record database; Log4j with daily rolling to record all JSON requests and responses; Material Bootstrap as the CSS framework.

2. **Project Summary**

   Built an application for teller transactions, or a branch delivery system, covering cash withdrawal, interbank transfer, and credit card transactions. It supports user roles, virtual account payment, journal printing, purchase transactions, and other transactions.

   Technology used

   Node.js with the Express.js Framework, a microservices architecture, Redis Pub/Sub as the message broker, jQuery on the front end, MongoDB as the database, and Bootstrap as the CSS framework. Modified a Node.js library to convert between ISO 8583 and JSON using regex and array splitting.

Project Experience

Mega Bank Project (continued)

3. **Project Summary**

   Built an onboarding application for funding, covering bank customer registration, current accounts, and deposits. The back end queries core banking to check whether a customer already exists in the host (core banking) using ISO 8583. Added an OCR feature for ID card scanning and selfie detection, so the selfie can be validated against the government database, ensuring all customer data is valid before it is sent to core banking.

   Technology used

   Node.js with the Express.js Framework for the API and jQuery on the front end. Material Bootstrap as the CSS framework, and a Spring REST API as middleware to the database log. For security, the application tracks IP requests and performs IMEI detection on Android devices, though only on Android 9 or earlier, as Android 10 (Q) restricts IMEI access.

4. **Project Summary**

   Built a content management system in vanilla PHP, without a framework, to manage content such as images, promotional information, and product lists, and to access files on the server.

   Technology used

   Developed in PHP to manage credit card information and credit card product descriptions for the credit card onboarding application.

Project Experience

XL Axiata Project

1. **Project Summary**

   Enhanced the back end of AXIS Web Grosir using Spring Boot, with Redis to cache voucher purchases and OTP emails. Front end built with Next.js.

   Technology used

   Spring Boot to create APIs; Spring Cloud for microservices, including centralized configuration, centralized logging, and an API gateway. Redis for caching, Oracle as the database, GitLab for source code storage, and Docker Compose for local testing in Docker.

2. **Project Summary**

   Enhanced the back end of XL Bizcare using Spring Boot, with Angular on the front end. Deployed to an on-premise server using Jenkins and a Dockerfile, and also deployed to a Kubernetes environment.

   Technology used

   Angular on the front end and Spring Boot on the back end, with Swagger for API documentation and Plop.js to auto-generate much of the Angular and Spring Boot code. Kafka was used for asynchronous system integration.

Project Experience

DOKU Project

1. **Project Summary**

   Placed on the Remittance team to build middleware for SNAP API standardization. Later reassigned to help build service tests using Cucumber.

   Technology used

   Java Spring Boot framework with middleware libraries such as RestTemplate. Service tests using Cucumber.

2. **Project Summary**

   Reassigned to the Sales Enablement team to build the following projects:
   - Affiliation API
   - Sales Dashboard
   - KYB Dashboard
   - Blast Email
   - Promo Engine

   Technology used

   Spring Boot framework, with Redis for caching, PostgreSQL as the database, Alibaba Cloud as the cloud platform, and Kafka for message queue integration.

Project Experience

Appfuxion Project

1. **Project Summary**

   AGIS Test Suite - a platform that automatically generates test suites from a source document. The document is uploaded and digested as context, allowing users to chat with it and generate test cases from its contents.

   Technology used

   Spring Boot, Java, Redis, and Kafka, among others.

   Clients

   CIMB Malaysia.

2. **Project Summary**

   AGIS Claims - a claims adjudication system that derives decisions from receipt and insurance documents, producing approve or decline outcomes to support adjudication decision-making.

   Technology used

   Spring Boot, Java, Redis, and Kafka, among others.

   Clients

   Allianz Malaysia and Tokio Marine Insurance Malaysia.
